

ABSTRACT OF THE DISCLOSURE

The present invention is a system and method for gathering disparate content from various sources including the Internet and broadcasting such content for display on a television receiver. The content is captured, rendered, and placed into predetermined templates to create 5 pages, and the pages are organized into an album of pages which are displayed in a loop, predefined sequence, or randomly. The album pages are encoded into a form that can be scheduled for broadcasting, and are transmitted to viewers for display on television receivers or similar devices.
